

CONSTRUCTION MANAGEMENT PRINCIPLES TRAINING

The Construction Management Principles course provides a basic understanding of construction management and the role of the construction manager (CM).

This course will provide an overview of owners and project types, contracts and agreements, construction management project management, leadership, ethics, soft skills, and career development.

Who Should Attend?

College seniors, recent graduates, and professionals looking to start or transition to a career in construction management.

Learning Objectives

- Distinguish and explain use of construction management and review responsibilities of CMs within the project scope.
- Identify and describe the factors controlled by the specialized management technique and describe the use techniques to plan, coordinate, monitor, and control a construction project.
- Understand the overall process of safely managing a quality project from start to finish while addressing risks, staying within budget, on schedule, and meeting scope expectations as applied specifically to the construction industry.

Credit for Professional Development

CMAA provides professional development credit for those who complete the Construction Management Principles course. In order to meet the varied formats for reporting mandated education requirements to licensing boards, credits are identified as Professional Development Hours (PDHs) and CMCI Renewal Points. Partial credit is not assigned. The full day of the course must be completed to receive credit.

Construction Management Principles
